| Botanical Name | Cedrus Atlantica   | Cedrus Atlantica Glauca   | Cedrus deodara  | Cedrus Atlantica Glauca Pendula  | Cedrus deodara Aurea  | Cedrus deodara Pendula  |
|----------------|--|---|---|--|---|---|
| Common Name    | Atlas Cedar  | Blue Atlantic Cedar   | Himalayan Cedar   | Blue Atlantic Weeping Cedar  | Golden Deodar   | Weeping Deodar  |
| General Info   | Native to NW Africa. Erect tree with near horizontal layered branches and rigid needle-like leaves. Male egg shaped cones are 5-8cm long, sit on top of branches and shed pollen | Pyramidal habit when young, but with age becoming flat topped with ascending or horizontal branches. Cones are barrel-shaped and upright. | Branches almost to the ground. Branch tips and leaders droop and have a fine soft needles. Barrel shaped cones 7-10cm long. Yellow pollen released in clouds from cones 4-6cm long. | Long drooping branches filled with powdery blue needles in whorls. It can be staked to create any shape that you wish. | Develops an open, upright pyramidal shape at a young age. The female cones are held upright on the upper branches and are large, egg-shaped and purple-green, while the smaller male cones are elongated and shed copious amounts of yellow pollen in spring. | Main branches spread closely to the ground. Fine needle foliage droops. Cones sit erect on branches |
| Growth Speed   | Slow   | Slow  | Moderate  | Slow   | Slow  | Slow  |
| Colour         | Deep green   | Silver blue   | Silver green  | Blue Green - blue more intense in spring/summer  | Bright yellow darkening to yellow-green over summer   | Yellow  |
